Motivated 1st-year Mechanical Engineering Master's student with experience in product development and electromechanical systems. Interested in using my design, prototyping, and problem-solving skills to create innovative and reliable engineering solutions. Seeking for internship as a Mechanical Engineering Intern during Summer 2026.

Education

MS in Mechanical Engineering, Michigan Technological University	2025-2027
BE in Mechanical Engineering, Don Bosco Institute of Technology	2017-2021

Core Skills

Design & Manufacturing: 3D CAD (SolidWorks, Creo), GD&T, Additive Manufacturing, Sheet Metal Design, Machining, Metal Stamping. **Soft Skills.** **Simulation & Analysis:** Simcenter Amesim, MATLAB/Simulink, Ansys, Thermal Analysis, FEA (SolidWorks/Creo Simulate). **Prototyping:** 3D Printing, Rapid Prototyping, Engineering Calculations.

PROFESSIONAL EXPERIENCE

Associate Mechanical Engineer, Allegion India , Bengaluru, Karnataka

July 2022– July2025

- Streamlined procurement by handling RFQs, supplier quotations, and documentation for both prototype and production requirements.
- Ensured cost efficiency, quality, and timely delivery by coordinating with suppliers and cross-functional engineering teams.
- Drove localization efforts as part of the core team for the “India for India” project, reducing dependency on imports and improving supply resilience.
- Leveraged ERP systems and project management tools to support projects like Zion Wave 1, Wave 2, and Project Martha, ensuring on-time delivery through effective coordination with global commodity managers and local engineering teams by achieving 95% on time delivery and \$300K savings during Phase 1 .
- Solved complex design challenges by engineering mechanical lock mechanisms and deadbolt latches in compliance with BHMA and industry standards.
- Enhanced security and innovation by researching competitor products and patents, contributing to technical disclosures.
- Improved product reliability and manufacturability through kinematic studies, GD&T application, and tolerance stack-up analysis.

Engineering Intern, Bullwork Mobility, Bengaluru, Karnataka

Aug 2021-Dec 2021

Projects: Self Driving Electric Agriculture Vehicle Concept Development

- Optimized performance of an electric agricultural vehicle by designing a gearbox and conducting structural analysis of chassis, roll cage, and cabin in SolidWorks.
- Elevated product functionality and aesthetics by collaborating on industrial design initiatives.

LEADERSHIP & INVOLVEMENT

Led the Motion Multiplication AD project under Allegion India's Friday Innovation initiative, improving exit device latch retraction from 1" to 2" (100% increase) in the same form factor, resolving unlatching issues during tornado and hurricane conditions, and received the Best Innovation Award.
